

EXPERIMENT NO.: 20

TITLE: Creating a GitHub Repository and Implementing Version Control

AIM: To create a GitHub repository for a team project, manage individual module branches, merge changes using pull requests, resolve conflicts, and document the version control workflow using a README file.

OUTPUT:

RESULT: A GitHub repository was successfully created and version control was implemented using branches and pull requests. Changes were reviewed and merged, merge conflicts were resolved, and the project workflow was documented in the README file.
